

Amendments to the specification, with markings to show changes made:

Please insert the following paragraph at page 6, after line 18 under the section labeled “DETAILED DESCRIPTION;” and before line 19.

To facilitate the clarity of the ensuing description, words listed below have been ascribed the following meanings:

- 1) A nodule is a protruding structure with outer surfaces.
- 2) A squeegee is an elongated and protruding structure, i.e. a nodule that is on the average thinner in one dimension than the other, the wider dimension being referred to herein as the elongation direction.
